Positivity Rate by Region

HIV Cascade

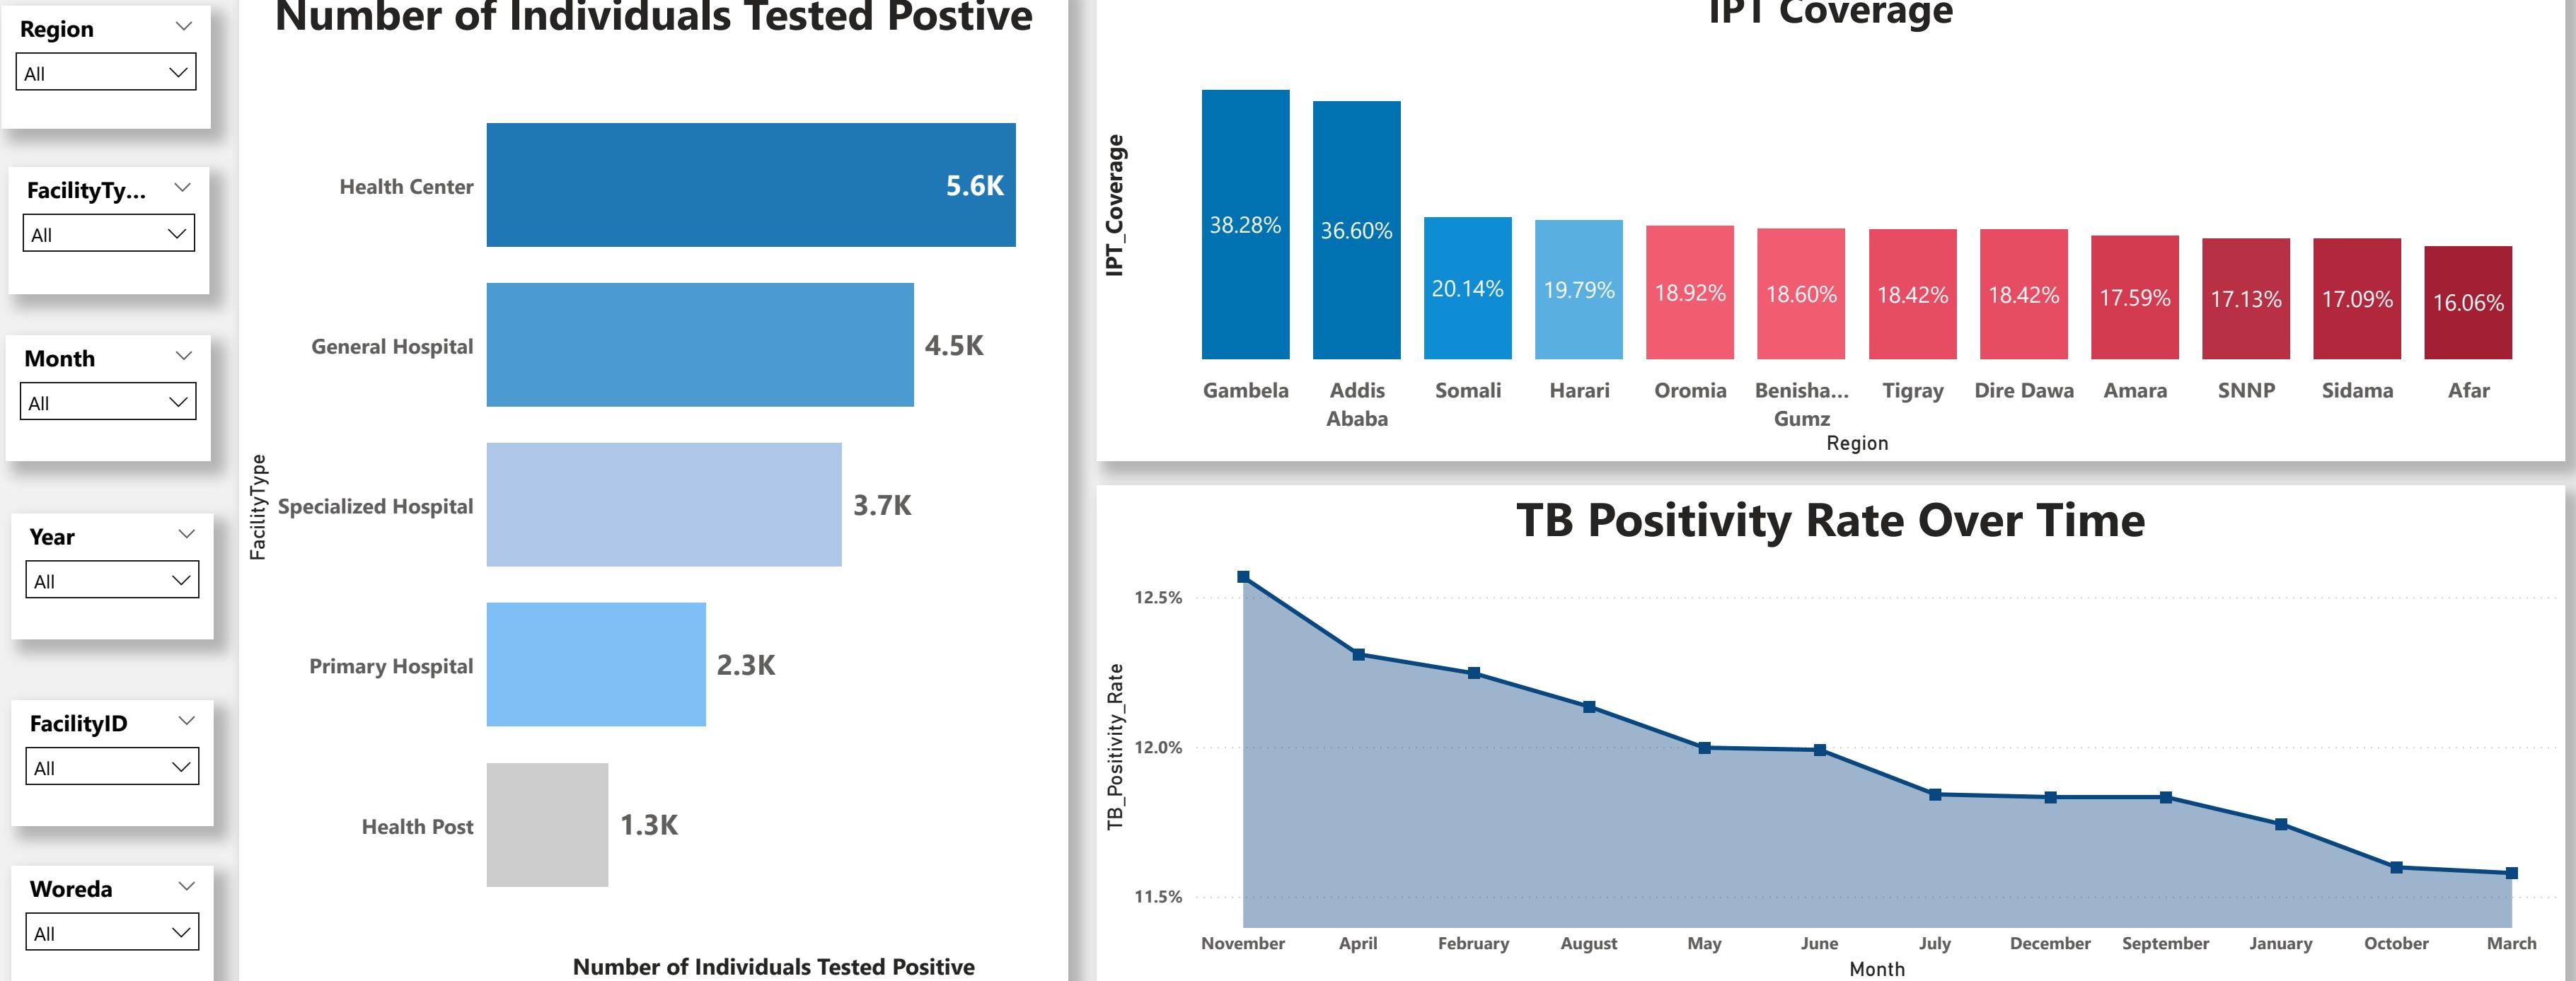

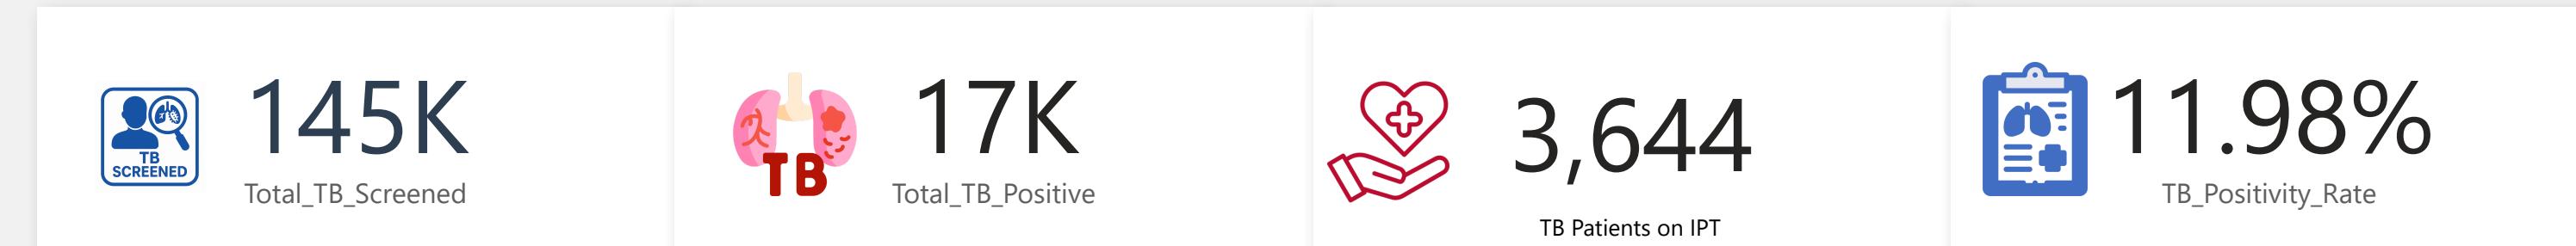

ART Coverage by Month

Gambella and Addis Ababa continue to report the highest HIV positivity rates (4.15% and 3.88%) despite national ART coverage of 92.42%. The declining trend in ART coverage over the past year highlights an urgent need to address treatment retention and follow-up. Lower positivity in Somali, Tigray, and SNNP indicates successful prevention and testing coverage.

Data Period: Jan–Dec 2023

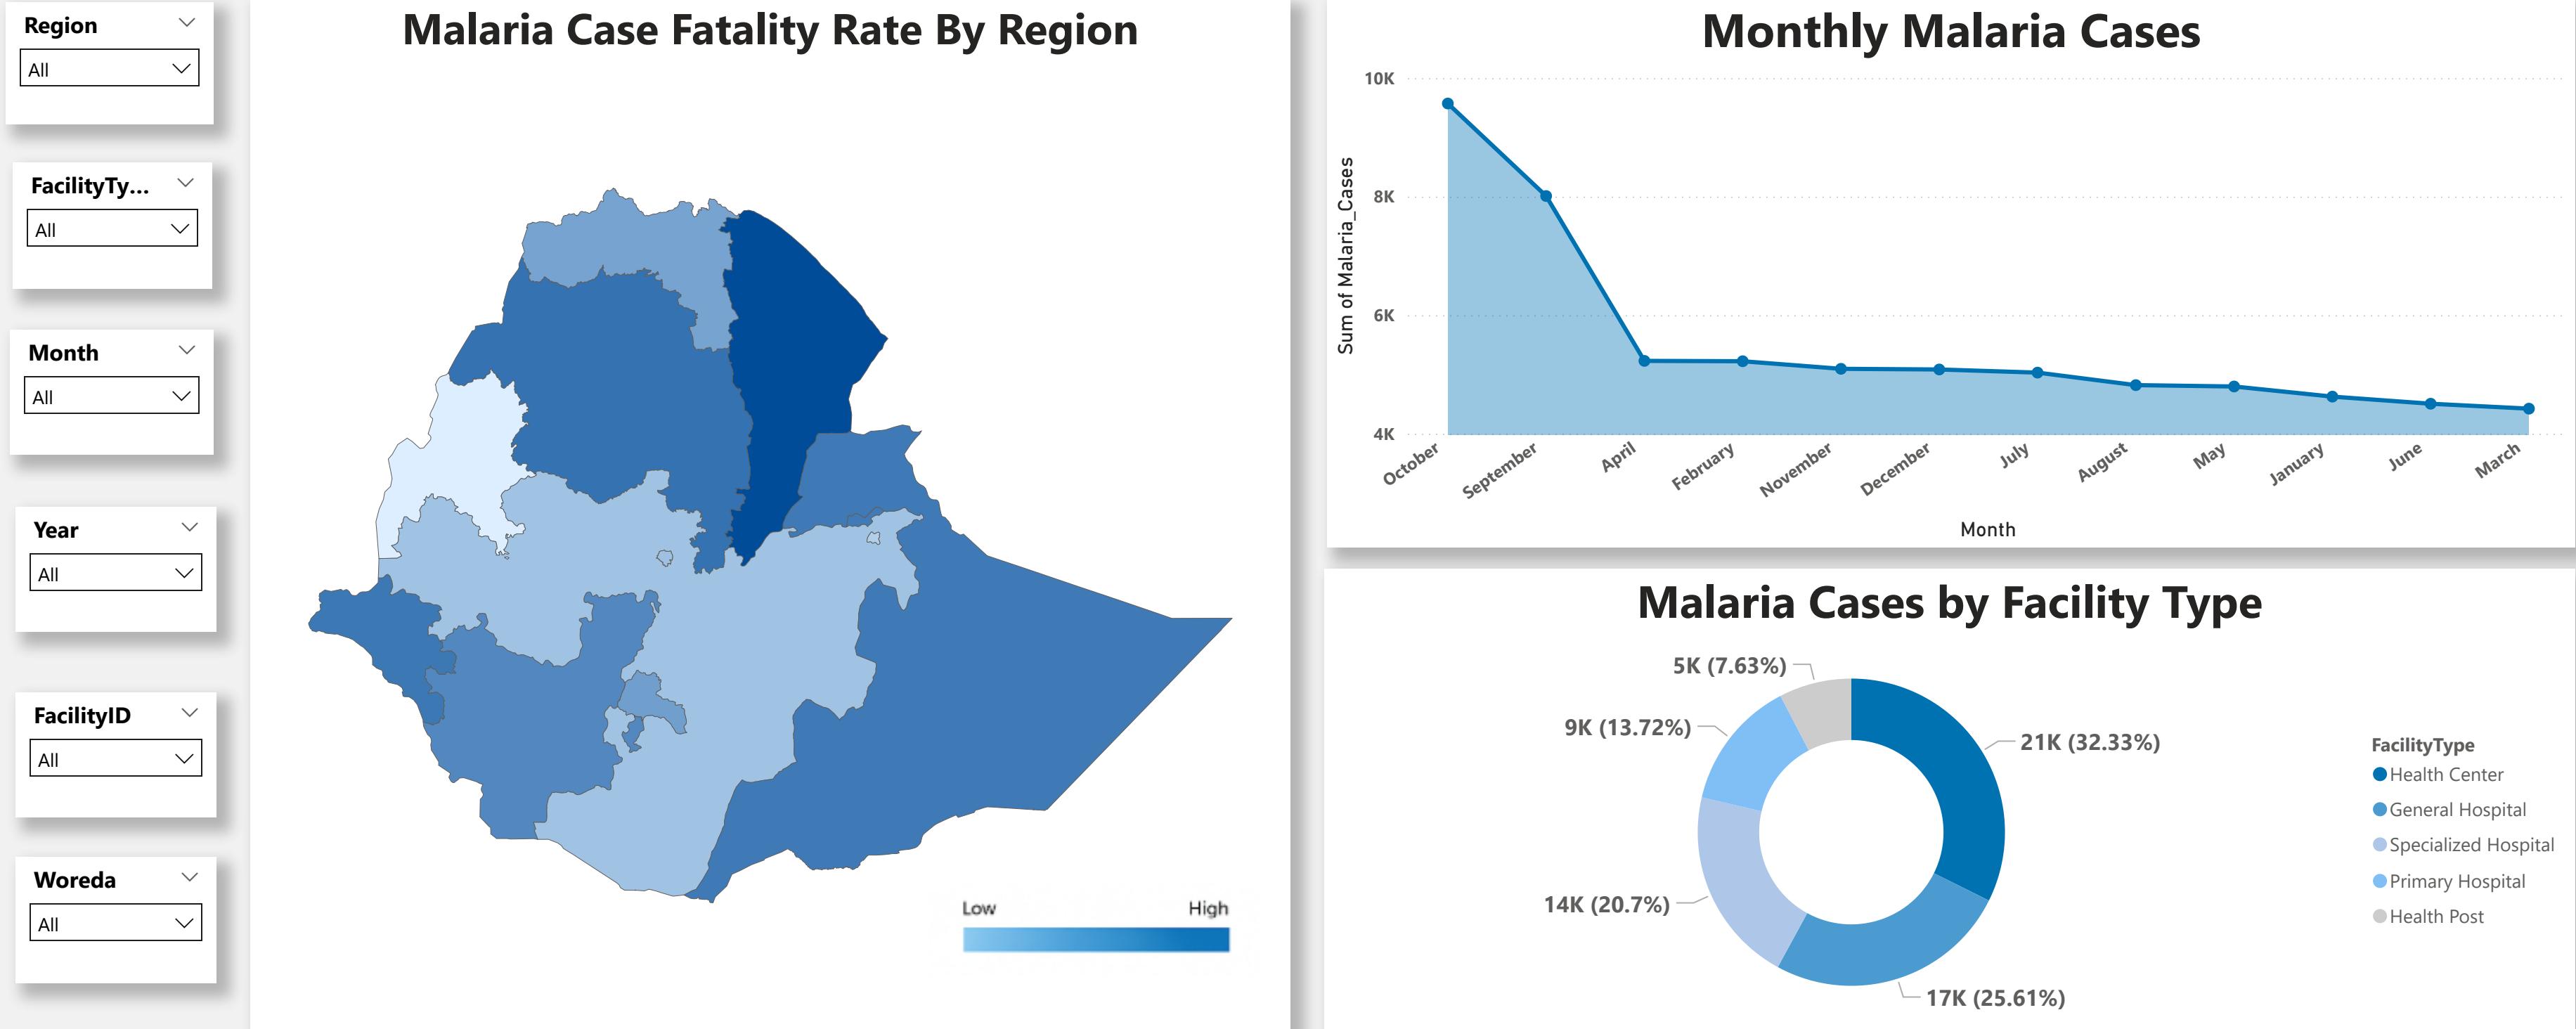

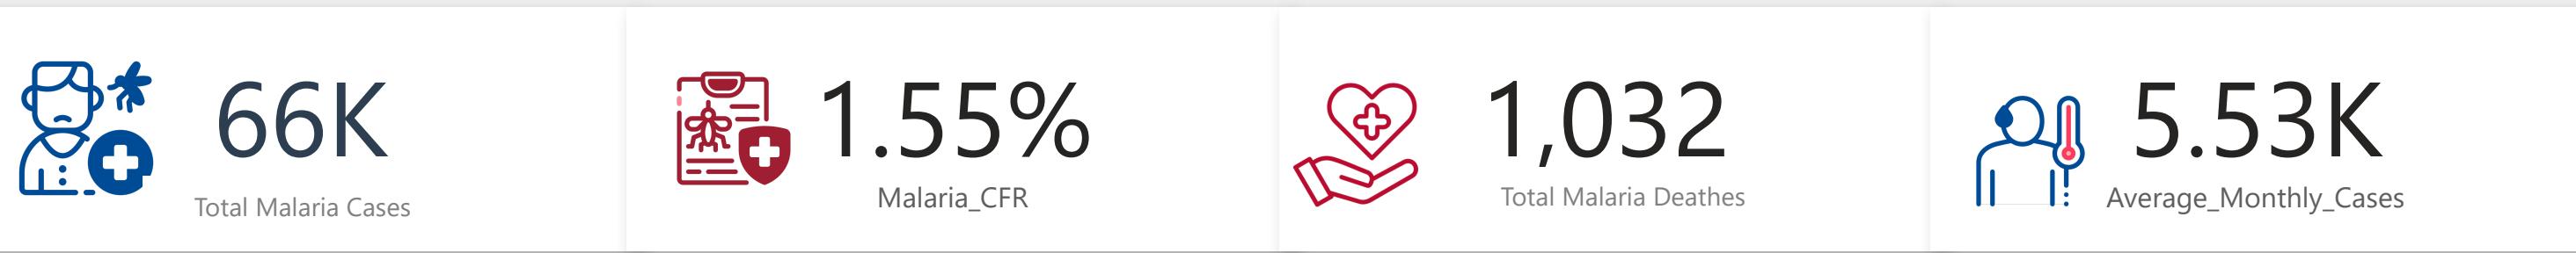

TB Screening & Treatment Dashboard

TB positivity rate declined steadily from July to March. Gambella and Addis Ababa show strong IPT coverage, while Afar and Sidama remain low. Most TB positives are identified at health centers.

Delivery Rate By Region

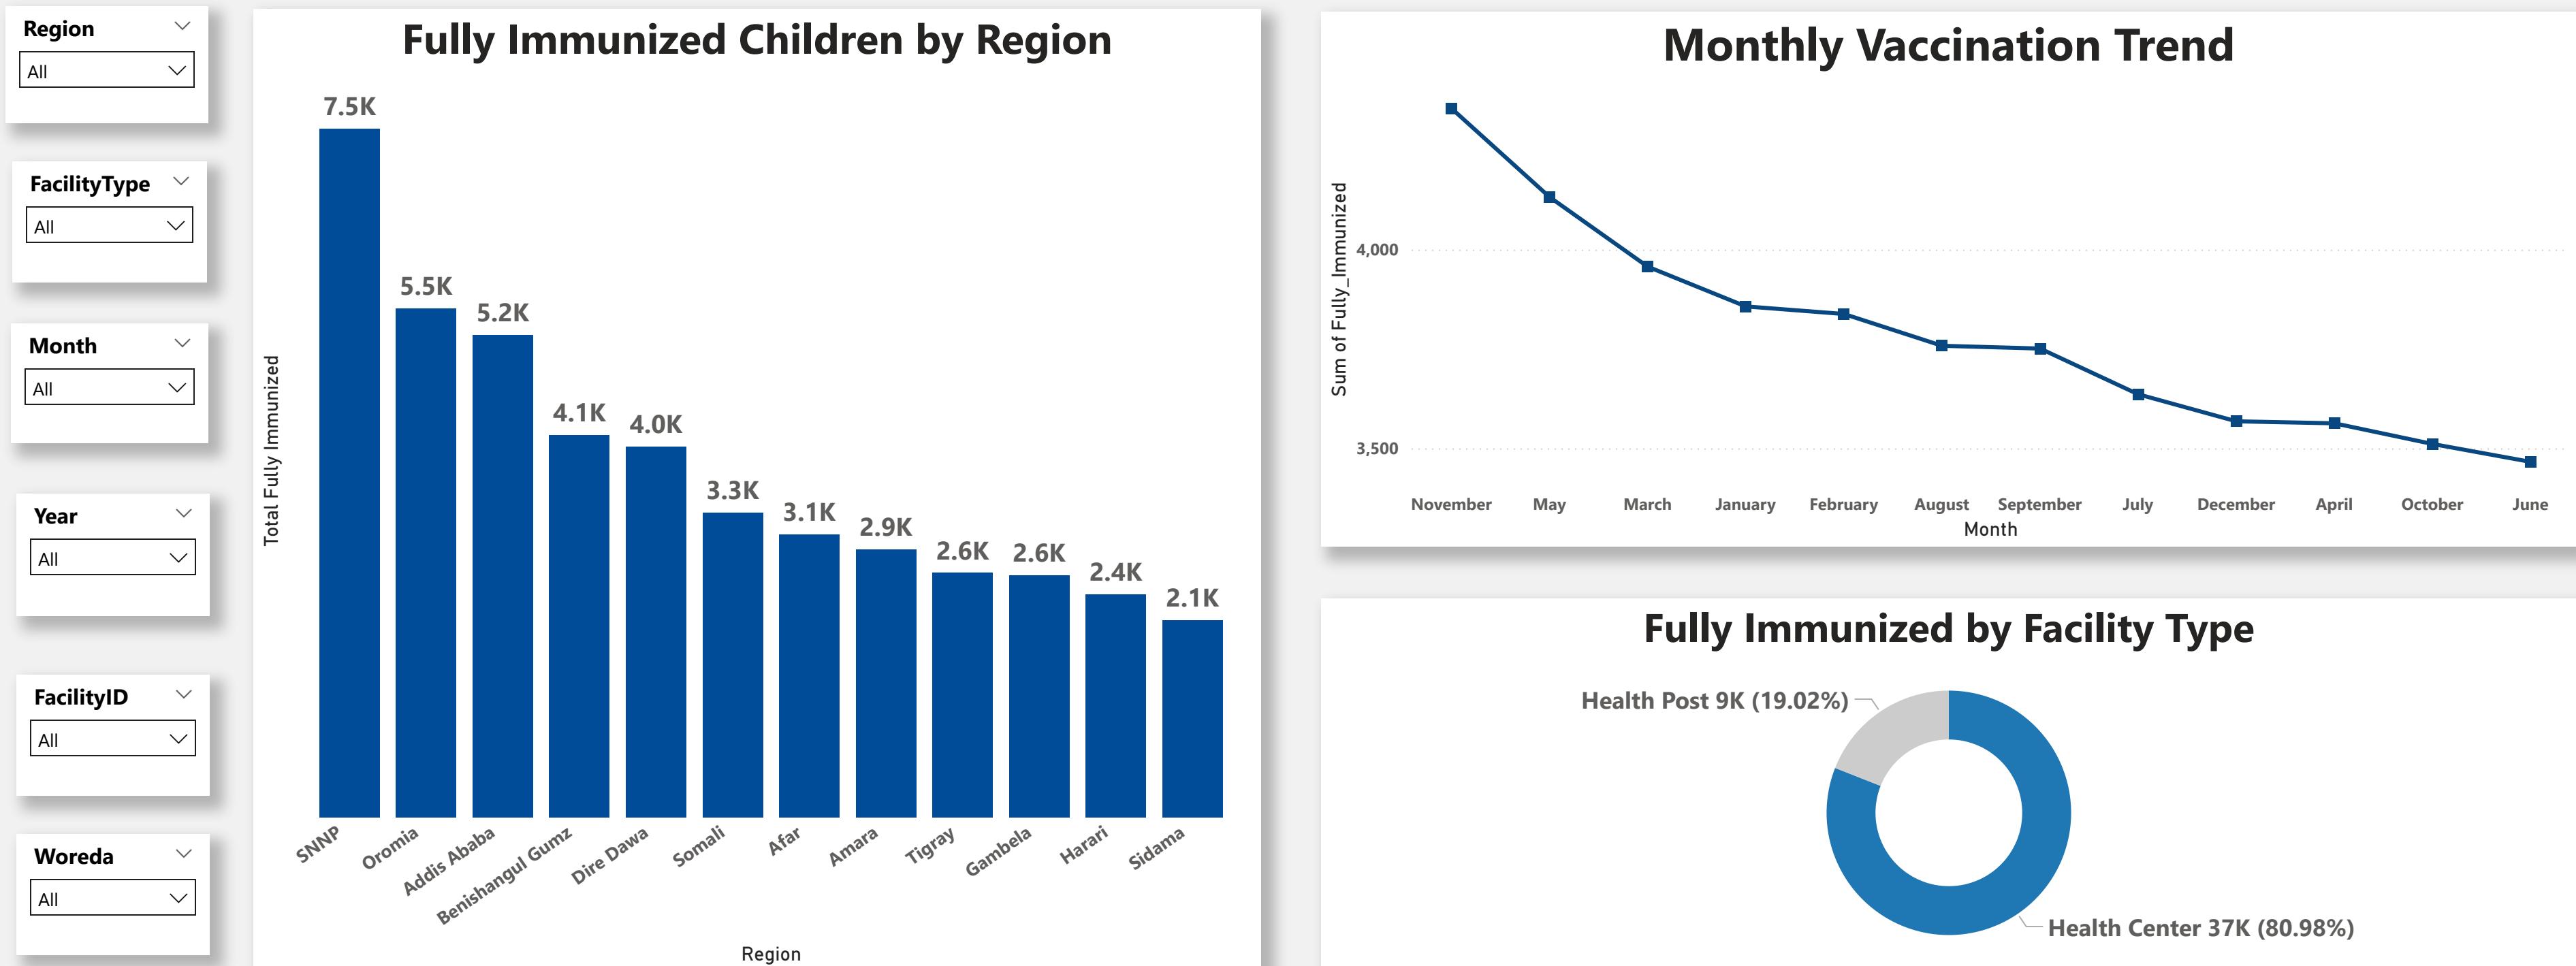

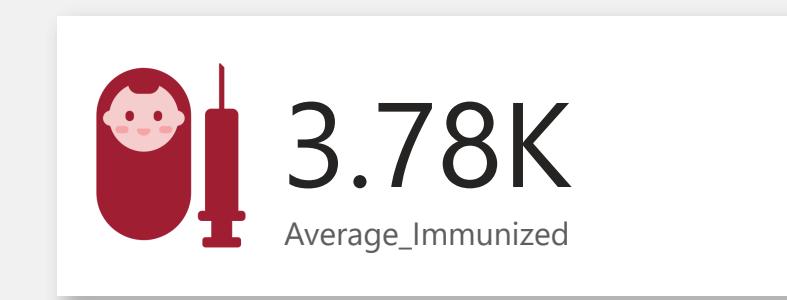

Deliveries Conducted by FacilityType

Facility delivery rate stands at 75.23%, with strong ANC coverage but a drop-off in institutional deliveries. Most births occur at health centers. Regional disparities suggest the need for targeted support in low-performing areas.

Data Period: Jan–Dec 2023

Child Immunization Dashboard

80% of vaccinations were conducted at Health Centers. Regional coverage varies, with some areas below 70%.
